(II) Third-Party AI Model Services

The platform is an artificial intelligence model aggregation platform, and different AI services may be provided by different model providers. When you actively choose to invoke a particular third-party model, the relevant request may be forwarded and processed through legally accessed model service providers, API technical service providers, model aggregation service providers, cloud computing or network infrastructure service providers. Where a model provider processes relevant information as an independent personal information processor, you should also read its corresponding Privacy Policy and service terms. The foregoing arrangements do not exempt the platform from its personal information protection obligations under applicable law.

If the platform launches a program in the future that allows users to participate in product optimization, model improvement, or data sharing, we will seek your explicit consent through a separate page, pop-up window, or other prominent means. You have the right to freely choose whether to participate, and refusal to authorize will not affect your normal use of the platform's basic services.

(III) Third-Party Model Notice

We will select the corresponding model service chain based on the actual model, invocation method, data type, user location, data recipient location, and applicable law, and will constrain model providers' processing of relevant data through contractual arrangements, access controls, necessity reviews, and other measures. The model provider's rules concerning data retention, analysis, or training shall be governed by the model information displayed by the Platform, the agreements between the parties, and applicable law.

For models labeled "Zero Data Retention" or having similar characteristics, we will provide the relevant services in accordance with the rules of the corresponding model service. The platform will not uniformly promise that all third-party models implement zero data retention or will never use data for training when such promise is not supported by actual service terms.
